Subject: Feedback on "A possible Design for a National Emissions Trading Scheme"

Attention National Emissions Trading Taskforce Secretariat,

Re: Feedback on "A possible Design for a National Emissions Trading Scheme"

Currently there is little economic incentive to deploy existing or new technology to reduce greenhouse gas emissions. A National emission trading scheme puts a price on greenhouse gas emissions, thereby providing incentives for the adoption of clean energy technology. I strongly support and encourage the development and implementation of a National Emission Trading Scheme.

Regards

Matthew Brown B. Nat Res
